

Wireless Charging Pad
Model: YU1097

User Guide

All Charged Up: About Your YOUSE Qi Wireless Charging Pad

No wires. No fuss. Charge your cell phone or any other device without having to untangle cables. Just place your device on the slim and sleek, button-free pad.

Before you begin, read this user guide thoroughly. It's a good idea to read the manual of the devices you will be charging on the pad as well.

Attention: Parts of the pad are magnetized. Do not put credit cards or other magnetic storage devices near the pad as information may be erased.

The YOUSE Qi Wireless Charging Pad has a nickel-free surface.

The IQ of Qi

Qi technology allows you to charge a compatible device quickly and wirelessly through electromagnetic induction. All you have to do is place the device on top of the Qi-enabled YOUSE Wireless Charger Pad to charge it.

The Pad: Parts And Features

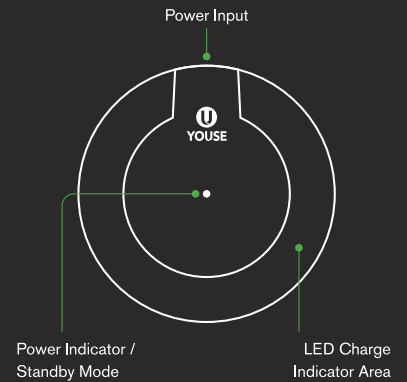

1. Qi Wireless Charging pad
2. Pulsing blue LED indicator light
3. Power supply port
4. Standby indicator light

NOTE: If a device is not Qi compatible, you will need a Qi receiver to charge the device.

Connecting the Charging Pad To A Power Source

Attention: You can use any compatible micro USB cable to power your YOUSE Qi Wireless Charging Pad and a wall charger.

1. Plug your USB cable into a wall charger.
2. Plug the other end of the cable into the micro USB power supply port on your pad.
3. A little red light will appear indicating that the pad is in "stand-by" mode.

Quick-Charging Your Device

1. Make sure the charging pad is clear of any items. Your device will not charge if there is something else on the pad.

2. Place your device on top of the pad. Once it is on, the pad's blue light will begin to pulse. This means your device is charging.

Note: It is normal for the pad to feel warm and may get warmer if you use your device while it's charging.

Troubleshooting:

- If your device is not charging properly, take it out of its case and try again.
- Check to make sure your device is Qi compatible. If it is not, you will need a Qi receiver to charge it.

Indicator Lights and What They Mean

Red light: Means the pad is receiving power and is in standby mode.

Blue pulsating light: Means that your device is charging. It will continue to pulse even after your device is fully charged.

Product Safety

Taking care of your pad will protect your warranty coverage. Here is how to properly care for your U-YOUSE Wireless Charger Pad:

- Keep it dry—any moisture, including humidity, can corrode electronic circuits.
- Do not use your pad if it gets wet. Wait until it dries.
- If the pad is damaged in any way, do not use it.
- Keep it free from dust—dust can damage moving parts and electronic components.
- Do not store in cold temperatures as moisture can form inside the pad when it warms up to room temperature/charge.
- Do not modify the pad in any way.

- Never drop, knock or shake the pad. This could break internal circuit boards and mechanics.
- Always clean your pad with a soft, clean dry cloth.

Caution: If you have an implanted medical device, including pacemaker, implanted cardioverter defibrillator, etc., you should:

- Keep the pad more than 6 inches away from the medical device.
- Never carry the device in the pocket of your shirt.
- Turn the pad off if you think it is interfering with your medical device.
- Follow the direction that came with your medical device.

FCC Statement

This device complies with part 15 and part 18 of the FCC Rules. Operation is Subject To the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. Changes or modifications not explicitly approved by the party responsible for compliance could void the user's authority to operate this equipment.

Note: this equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 and part 18 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

The equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. During the operation of device a distance of 15 cm surrounding the device and 20 cm above the top surface of the device must be respected.
